

ABSTRACT

Print sheets 7 stacked up are inserted into a package member
8 so that the sheets 7 in this state can be set in a printer
5 together with the package member 8. The package member 8 is
provided with an identification mark 31 while the printer is
equipped with a reflective sensor so that the identification
mark 31 will be placed in a reading area of the reflective sensor
only when the sheet package 9 is loaded in the printer in a correct
10 direction.
